

Customer information on GALILEO Version 6.1.0

We are glad to inform you about the changes/enhancements in our software package **GALILEO Version 6.1.0**.

The version offers the following new essential features:

- Integration of CE 5
- Scalability of projects (automatic project zoom when target changes e.g. 10" →15")
- Moving objects
- Integration of the new 15" XVx-4xx types
- USB stick support
- USB keyboard support
- CE configuration: login for network drives, communication meta files

For the already phased out targets

- MC2-4x0-57 (StrongARM processor)
- GF2/MV4-6xx

we cannot assure the functionality because of the older hardware platform. Therefore these targets will not be supported in Galileo version 6.1.0

➔ For these targets version 6.0.x will go into maintenance status

As a result of this we are able to react faster and more flexible to your requirements with our current product portfolio. We hope herewith to give you the highest possible planning security for further applications with our products.

Kind Regards

Your Micro Innovation Team
